# Next-level hybrid cloud with Lenovo and Microsoft

It's time for Lenovo ThinkAgile MX
for Azure Stack HCI.

## Hybrid cloud has evolved

Deliver a new chapter in your organization's exciting story. It's time to accelerate innovation, support scalable hybrid working, and unlock transformational data to maximize your datacenter infrastructure's potential.

**Extend your business to the cloud with an Azure hybrid solution.**

## How next-gen hybrid cloud can accelerate your success

Next-generation hybrid cloud with Lenovo ThinkAgile MX for Azure Stack HCI, delivers on modern organizations' workload needs.

### This includes the ability to:

**Unify resource management with a flexible cloud-connected architecture:** Azure Arc extends the Azure public cloud to help you build, operate and secure applications and services on Lenovo ThinkAgile MX infrastructure, with familiar tools. Connect your Lenovo ThinkAgile MX clusters to your Azure portal, for simplified monitoring and management, eliminating the need for an on-premises monitoring system

**Run containerized applications:** Simplify the process of building, managing and deploying cloud-native apps across the public cloud and other locations, with AKS. Benefit from unified management and governance, integration with Active Directory, unparalleled flexibility, and more, across your hybrid estate

**Bring the cloud to your on-premises environment with Azure Stack HCI:** Where low-latency is essential or you need to minimize outbound networking dependencies, deploy cloud-native applications close to where data is produced and consumed, including in your own facilities and at the edge

**Seamlessly scale high-performance virtual desktop environments across the cloud and on-premises:** Combine Lenovo ThinkAgile MX with AVD in the cloud, to create seamless, flexible hybrid deployments that comply with data residency and other requirements

**Turbocharge your deployment of SQL Server databases:** Use the Azure Stack HCI operating system to run your mission-critical SQL Server databases very efficiently on premise, securing data locality with low access latency

# Meet Lenovo ThinkAgile MX for Azure Stack HCI

Lenovo ThinkAgile MX for Azure Stack HCI is a complete hybrid cloud solution, combining the best of Lenovo and Microsoft, including Azure services.

## Benefit from:

- **Pay as you use pricing and flexibility:** Enjoy everything-as-a-service with Lenovo TruScale, enabling you to scale up and down quickly to meet changing demands, with no upfront costs

- **Running your applications anywhere with simplified management:** Deploy cloud-native apps in locations of your choice, and access them from Windows, Mac, Android and iOS, via single sign-on

- **Robust business continuity and disaster recovery:** Security features that span from the hardware to the Azure cloud enable you to build secure foundations for your workloads that protect data and availability

- **24/7 enterprise support:** Lenovo provides a single point of contact for hardware and software issues. You'll also get assistance with onboarding, data migration and license-management

- **Efficiencies that unlock business value:** Cloud-connected hyperconverged infrastructure enables you to consolidate on-premises, thereby freeing up resources for innovation and other high-value initiatives

- **Lenovo Cloud Marketplace:** Deliver complete solutions for your customer with Self-service access to dashboards and reporting, subscription purchasing and management, and billing information
